**FOR IMMEDIATE RELEASE**

## **Foresite Introduces Residue Analysis in China Through Microtek Partnership**

Press Release (November 10, 2008) – Foresite, Inc., Kokomo, Indiana, now provides residue/cleanliness analysis of electronics in China (Changzhou). The analytical laboratory testing utilizing Foresite's C3<sup>®</sup> Critical Cleanliness Control and/or Ion Chromatography available from Foresite is now available in China through a partnership with Microtek Laboratories facility in Changzhou. This means that residue analysis can be performed with the C3 localized extraction and IC characterization at Microtek in China with Foresite data interpretation included in a report generated from Foresite's headquarters in the U.S. without the cost and delay of international shipping.

Foresite, Inc. ([www.Residues.com](http://www.Residues.com)), is a consultant, laboratory and equipment development company specializing in the identification of process-related residues that are detrimental to electronic product reliability and the elimination, prevention or mitigation of such residues. Terry Munson, President, states that this partnership has already responded well to customer needs by combining automated data acquisition, real-time data transmission and the advantage of international time zone differences.

Microtek Laboratories ([www.TheTestLab.com](http://www.TheTestLab.com)), provides a full spectrum of testing, analytical and education services from both their US and China operations. In addition to providing test results and data interpretation, Microtek offers specialized client services such as failure analysis and test program development. Bob Neves, Chairman/CTO, states that the testing and analytical services provided by Microtek are enhanced by this new partnership allowing Microtek to more fully service its customer base.
